Dear Mr. Hansen,
It is understandable that your ability to survey the Gordon Creek area has been hindered by the weather and lingering snow. You are hereby granted an extension of three weeks to complete the required as-built maps.
You should now make the submittal with the required maps by no later than May 16, 2016. Please contact Cheryl Parker to ensure that you have the necessary designs prior to making the submittal. Thank you for your help in completing this permitting action.
Sincerely,
Daron R. Haddock

> As we discussed on the phone late last week, the snow has finally melted off most of the bottom of the canyon at the Gordon Creek Mines where the channel repairs were completed last year. I was able to measure the areas of disturbances related to trucking in the filter material and rip rap for channel repairs. However, preparing a map illustrating the location of the repairs is a bit more problematic. We do not have suitable AutoCAD files of the maps requested to be updated in the Division's deficiency letter. We plan to use survey quality GPS equipment to locate the centerlines of the repair roads and the perimeter of larger disturbed areas. We will use that information to create a drawing of the repair areas using a Google-Earth or similar base map of the area. Our current plan is to conduct the survey this Thursday, April 28th, if the weather cooperates. After obtaining the survey information, we should be able to generate the map in two to three weeks. Because of time involved completing the survey and preparing the map, we unfortunately need to request another extension of time to address the Division's deficiencies related to our submittal.
