DIVISION OF OIL
GAS & MINING

Re: Response to Spoil Disposal Area Plan Requirement

Dear Mr. Braxton:

The following response will be added to the response to UMC 784.11(b)(4) on page 784-169 of our approved permit:

> Spoil disposal areas as shown on map 44, sheets E12 and E13, Surface Facilities labeled as number 74, (Table 67) are used to store overburden material from various sources, including, sloughage from road cuts, highwalls and miscellaneous surface clean up projects. This material is stored for indefinite periods and is used for various projects such as, rip rap for ditches and erosion protection, and fill material for reclamation or road maintenance.
>
> The spoil disposal area drainages can be seen on Map 42, Surface Water and Sedimentation Control Facilities Map A. Sediment loss from the disposal areas will be controlled by constructing berms around the piles to contain runoff.
>
> The spoil disposal areas are located on existing roads and will require no special reclamation efforts. The areas will be reclaimed at the time the roads are reclaimed as discussed in response to UMC 784.13.

A revised copy of Map 44 and Table 67 are enclosed showing the addition of spoil disposal areas. When the Division is satisfied that we have satisfactorally addressed this issue, we will revise the Permit Text and provide copies for insertion into the permit sets.

Respectfully,

Ben Grimes
Sr. Environmental Engineer
