Re: Silt Fence Removable from Overland Conveyor Bents and Minesite Topsoil Stockpile and Straw Bale Removable at the Rail Loadout Topsoil Stockpile
ACT/007/005

To Whom It May Concern:

Enclosed with this letter are the C1 and C2 forms for an application for a minor permit modification to the Skyline Mine M&RP. The purpose of the permit modification is to allow for the removal of silt fence around the bent supports of the overland conveyor and at the minesite topsoil stockpile. Information provided also supports, the removal of the straw bales from around the rail loadout topsoil stockpile. Attached are the SEDCAD calculations showing the amount of runoff for each area and the volume of silt that is expected. The calculations show from zero to .35 ml/l of silt will flow off the sites for a 24 hour arithmetic average. Paul Baker inspected the bent sites and both stockpiles to look at the vegetation on 9 September 1999. He concurred that adequate vegetation had been established at the bent sites and the silt fences should be removed. The silt fences and straws used on each of the topsoil stockpiles were for erosion control and the permit was not modified to make either area an alternate sediment control area since runoff from both stockpiles reported to a sediment pond.

Call me at (435)448-2620 if you have any questions regarding this submittal.

Sincerely,

Gary Taylor

Provide a detailed listing of all changes to the mining and reclamation plan which will be required as a result of this proposed permit application. Individually list all maps and drawings which are to be added, replaced, or removed from the plan. Include changes of the table of contents, section of the plan, pages, or other information as needed to specifically locate, identify and revise the existing mining and reclamation plan. **Include page, section and drawing numbers as part of the description.**
