Thanks Kris. I will forward this to Daron Haddock at DOGM

>>> Kristine Curry 10/6/2008 11:26 AM >>>
John,

I hope you are the one that deals with this. ML 49287 is the number given to me by the arch consultants and your name is in the BS as the administrator of the lease. If it isn't you, please pass this info on to whomever it needs to go. Thanks.

I have received copies of two reports for the West Ridge Mine in Carbon County (T14S, R13E, Sec. 3). The first report is titled "An Intensive Cultural Resource Survey and Inventory of the Proposed Portal, Powerline and Access Corridor in the Left Fork of the Bear Creek Canyon Area," with a project number of U-08-SC-0737b,s. The second report is titled "An Intensive Cultural Resource Survey and Inventory of the Block Area for the Proposed Gob Vent Hole in the Right Fork of the Bear Creek Canyon Area," with a project number of U-08-SC-0871s. Neither survey recorded any sites, so the projects can be considered cleared.

I'm not sure, but I believe this info needs to be passed on to DOGM (they are the ones that deal with coal permits, right?), but I don't know who over there. All I know is that I was asked to rush the arch review because MSHA has given the mine a very short window for the gob vent hole. Hopefully, you know where it needs to go from here, 'cause I don't.

Thanks,
Kristine
