Subject: Re: Covol/Wellington

Hi,

I replied to your phone message before reading your email. It appears that you have not looked at the ITA document. Here are the answers to the questions you ask.

1. The increase in coal production is 500,000, going from 1,000,000 to 1,500,000 tons per year. The plant is being modified both in the list of equipment in use, increasing annual production, and the geographic footprint of the plant itself.
2. The plant is located at 1865 West Ridge Road. We have a map of their intended operational layout at their parcel of ground. It's a large format document so you'll have to come inspect it personally.
3. Construction of the modified plant may not commence until the air quality approval order has been issued. It is our understanding that Terra Systems never completed construction of the operation we approved for them, and so no inspection of that site has taken place.

Regards,

Timothy DeJulis

Hello Mr. DeJulis,

I just left a message on your phone, but realized that an email may be easier. I would like to get some basic information from you concerning this project.

1. Was an initial plant constructed with the 500,000 ton production capacity and now the capacity is being expanded? Or are the construction plans being modified to increase capacity prior to any construction?
2. Where is the plant located or proposed to be located? Do you have a map?
3. If construction is complete, has Air Quality conducted an inspection?

Thank you,

Priscilla Burton

Good Morning,

You may recognize the operation being modified by us as formerly owned and operated by Terra Systems. Covol acquired the Wellington plant, and the public comment period you refer to relates to an increase in production.

If the public notice does not contain enough information for your use, we have a fair amount of information we could pass along. For starters, the Intent-to-Approve document is available at http://www.airquality.utah.gov/PERMITS/Pc_nsr.htm - Look for the company name Covol and the PDF link to the right. It contains the contact information you asked for.

Please let me know what else you might need.

Regards,

Timothy DeJulis

There was a public notice in the Sun Advocate on May 19, 2005 about a NOI for Covol to construct and operate a coal preparation plant.

I work with the Utah Division of Oil, GAs, and Mining in the Coal Regulatory Program and Covol has not approached us with a "coal preparation plant". Perhaps it was a poor choice of words in the public notice.

Would you please give me a name of someone who I can call about this project? Also, if you have any information that you could e-mail me, that would also be greatly appreciated.

Thank you. Pam
