Hi Greg,

We no longer have anything officially on file for Kinney, but we will welcome a new application from the new company.

Thanks
Dana

FYI

We closed the file on Kinney. Much of the information in the application that was approved can still be a valid part of a new plan, but there is no Kinney permit. I just want to make it clear that this would not be a revision, rather a new application that would follow all of the new mine processes.

Hopefully we can work well from the base of the plan and get this done efficiently.

Thanks
Dana

Dana & Daron;

It is our pleasure to inform you that we have signed a lease agreement with Coal Energy Group 3, LLC, a Nevada limited liability company, owned by Bob Nead, to operate our Kinney #2 Coal Mine near Scofield Utah. Of course, and as you are aware, and likely remember, the Kinney#2 RMP was completed and approved 30 June 2011. With the passage of more than five years, the permit will require a revision. Having anticipated revising the RMP, we have continuously monitored ground and surface water at the mine site without interruption, and over the past year have reinstated "baseline parameters" in our analysis suite with SGS.

We write to authorize Coal Energy to take over the permitting process at the Kinney#2 Mine and apply for a permit revision in the name of Coal Energy. Our agreement with Coal Energy requires it to proceed directly and diligently with the permit revision. Carbon Resources will be monitoring progress of the revision by making inquiries of UDOGM personnel and checking facts on the ground. Should Coal Energy breach our lease agreement by failing to proceed with permitting as committed, Carbon Resources reserves the right to withdraw the permissions granted in this letter and take over and assume the permitting process in the name of Carbon Resources.

We look forward to many discussions with you and your staff as this transition proceeds.

Sincerely,

Carbon Resources, LLC
