Memorandum

To: Walter Swain, OSM Senior Project Manager, State of Utah, Denver

Attn: Steve Parsons

From: Chief, Mining Law and Solid Minerals, BLM State Office, Salt Lake City

Subject: Kaiser Steel Corporation, Sunnyside Mines, Carbon County, Utah Permit Application Package (PAP)

The Resource Recovery and Protection Plan (R_2P_2) or underground mining part of the subject PAP on file in this office is considered adequate for BLM administration of the associated Federal coal leases. Our memoranda dated November 5, 1984, and March 19, 1985, stated that the R_2P_2 on file in this office was in compliance with 43 CFR 3482.1(c) rules and regulations and we recommended that the Sunnyside mine R_2P_2 as amended, be included as an integral part of the subject PAP.

On March 19, 1985, we received a large package of maps and pages forwarded with your transmittal letter dated March 13, 1985, and identified as "03/05/84 UT DOGM transmittal of revisions for MRP in response to UT DOGM 01/06/85 technical deficiency letter."

Our review of the above maps and pages, including underground mine plan modifications, did not identify any conflicts with the underground mining part of the subject PAP or with future coal recovery within the plan area.

We concur with the Sunnyside Mine R_2P_2, as now amended, on file in this office, and recommend that it be included as an integral part of the subject PAP.
