INSPECTION REPORT COMMENTS

Permit No. ACT/007/006

Inspection Date 1/12/89

Please number comments to correspond with topics on previous page.

General Comments. The mine site was snow covered with about 18" of snow in those undisturbed and disturbed areas where snow removal operations had not been undertaken.

Because of snow conditions coupled with below freezing weather no runoff is taking place. Further most of the environmental control measures are snow covered.

Followup On Maintenance Items. The operator advised the undersigned that before he had a opportunity to perform the maintenance work adverse weather conditions prevented the such work from being completed. The exception is the other sediment control item mentioned in the 12/13/88 inspection report. The balance of the earmarked maintenance work would be completed in the spring before spring runoff according to Mr. Grimes.

INSPECTION REPORT COMMENTS

Permit No. ACT/007/006

Inspection Date 1/12/89

Please number comments to correspond with topics on previous page.

Water Monitoring Selected water monitoring records were reviewed. The operator revised Table 80 of the MRP and placed the stations in numerical and in decending order which is helpful.

He also advised the undersigned on the status of spring discussions between USFS & the operator.

Further he mentioned that on Feb 7, 1989 a hydrology/water sampling meeting has been scheduled with the division.

Water monitoring records are recorded on a TBM/main frame system.

Roads Roads were plowed and no problems were noted as related to the operators snow removal program.
