Hi Kirk,

An extension to July 21st to provide the Division with an amendment to the Coal Hollow MRP that provides the requisite narrative and design drawings for the sediment control measures installed on the south side of the excess spoil pile and the water line from the pit 10 sump to pond 3 is granted.

Based on our discussion regarding the need for documentation of sediment control measures in the permit, please also submit a narrative and design drawings for the sediment control measures that were installed in the gully that formed on the north side of the excess spoil pile.

If you have any questions, please feel free to contact me.

Regards,
Steve

To address the gully, Appendix 5-7 of the MRP will be amended to show the location of the erosional feature and include details of actions taken to control it. The water line rom Pit 10 sump to Pond 3 will require outside engineering, but it is expected that it can be completed within the 3 weeks.

Subject: Plans Due June 30th

Kirk,

The plans for the gully at the base of the excess spoil pile and water line from the sump in pit 10 need to be received by the Division tomorrow. The plans and submittal times were discussed in the field with you during the 6/9 partial inspection. The time frame for submittal was two weeks, Tuesday, 6/30 will be three weeks from the date of the inspection. Dana and Daron are not in this week so don't bother calling them, Steve is acting on Dana and Daron's behalf.
