Re: Reseeding of affected Spring

Dear Steve,

Please be advised that the prescribed seed mix was applied to the Spring Area on Friday, Oct. 31, 2003. The seed was purchased from Wheatland seed Co. in Brigham City, Utah.

Broadcast method consisted of one man using a hand held 2 quart rotary spreader to broadcast seed, while three men followed behind, spaced about 15 feet from one another with landscape hand rakes and raking in the seed mix until the entire prescribed area was adequately covered. Special care was taken to avoid the riparian area as directed, and the job is complete.

The operator feels that the timing was right, and the process should prove successful. If you have any questions, please contact me at your convenience.

Regards,

William L Bown
