Subject: An Update

Doug,

A quick update on what's going on over here.

We are starting to look at the Uintah Mountain Copper Co. decision that we pulled last year. It was pulled after it was appealed and we discovered we had not completed a Biological Evaluation (BE) for fisheries. We have since completed a BE and will be looking at the other appeal points to make sure they are addressed. I will make sure you get a copy of the new decision.

We are beginning analysis of the Shamrock Associates Honeycomb Calcite proposal. We are way behind on this one and need to get it completed. We plan to get scoping started this month. I am working with them on refining their proposal and will make sure you get a copy of the final plan of operations, scoping, etc.

We are also behind on Russ Conn's Dal Cuinn Claims proposal. If we can get a budget soon, we need to start scoping and get started with an analysis. I am working with him on refining his proposal and will make sure you get a copy of the final plan of operations, scoping, etc.

We have a new Geologist stationed at Duchesne. His name is David Herron. I am anxious to get him into the field this summer. He will do a good job for us.
