RE: Amendment to Relocate and Eliminate Certain Underground Water Monitoring Stations, Kaiser Coal Corporation, Sunnyside Mines, ACT/007/007, Folder #2, Carbon County, Utah

The operator submitted a request dated February 24, 1987, to amend the approved Sunnyside Mines underground water monitoring program by:

1. Eliminating the station located at drill hole 25 in the #3 mine;

2. Consolidating the 18th Left Outside and 19th Left Outside stations into a single station located at the #1 Slope (Main Dips) Sump; and

3. Relocating the 18th Left Outside station to the Manshaft Dips Sump.

The amended underground water monitoring program will encompass a total of ten stations.

Recommendations:

It is herein recommeded that the Division approve this amendment request, provided the operator submits an updated map (Plate III-3) showing underground water monitoring locations.
