The SSF pond contained water. Most of the water is overflow from the mine. This is covered under a temporary arrangement approved by the Division until such time that the new mine pond can be activated.

Other Sediment Control. The silt fences, straw bales and berms were checked in the four areas mentioned in the introduction of this report. The berms in the number two canyon storage pad, the silt fences below the tipple and contiguous to the gate may need some minor maintenance as a cautionary measure.
