---

When we last spoke, you raised the question about finding someone qualified to teach the surface blaster training and certification program for the State of Utah after the new contract with Bradley Safety Consultants expires.

I queried "Mickey" and he has made the following recommendation to the State of Utah; he will turn over his entire training program to two individuals at DYKON Blasting. They are Jared Redyke and David Hersey. They can be reached at 1-918-592-5278.

Since this program is the same as the one which is currently being taught, there should not be a problem with obtaining a new approval from the Office of Surface Mining for the new classes. Only the instructors will change.

Mickey said that if the Division desires, Mr. Redyke and Mr. Hersey would be willing to co-teach during one of Mickey's classes, (under his current contract), so that the Division can determine the adequacy of these new instructors as well as their delivery of the required material.

I have attached an inter-net flyer containing DYKON Blasting contact information.  
If anything else is needed, the Division may contact Bradley Safety Consultants, or me at the usual numbers.
