4. other sediment control measures - The silt fence was not adequately maintained and approximately 75% of the fence was lying on the ground. The operator was issued ~~a~~ N.O.V. 87-11-1-1 and given until APRIL 30, 1987 to repair or reinstall all damaged silt fence.

12. Backfilling and grading - The backfilling and grading appeared to be stable and and the soil materials appeared to be settling and stabilizing

13. Revegetation -

① Dogm recommends, but will not require, immediate coverage of the coal seam areas with Excelsior or other comparable mulch matting. Immediate use of this material at the site would conserve the soil moisture currently present and

promote vegetation. While the erosion netting proposed in the MRP would not have accomplished this goal and would have been very difficult to secure in the very loose soils last fall, the soil has sufficiently stabilized with winter moisture to facilitate attachment of Excelsior matting at this time.

(2) During the April monitoring trip, repair vegetation of the road from the first water bar to the fence and use rock or other means to prevent unauthorized access. The "Road Closed" sign has not been effective in preventing damage to the revegetation.

(3) The operator needs to revise the MRP to reflect techniques actually used in the revegetation. Obtain written approval for any additional changes in the MRP prior to their implementation.
