Purpose of Inspection:
The operators were required by two separate cessation orders (for the two mining operations) to consolidate operations within permitted areas. The purpose of the inspection was to see whether this had been done.

Inspection Summary:
7. Backfilling/Grading (trenches, pits, roads, highwalls, shafts, drill holes)
The operator has, as required, marked the disturbed area boundaries and has consolidated rock into the disturbed areas. The remaining areas are rough with a moderate amount of rock on the surface, and they are ready to be seeded.

Conclusions and Recommendations:
The operator has complied with the portions of the cessation order requiring that operations be consolidated. The graded areas will need to be seeded this fall with perennial species, and this will complete the abatement.
