inspection report

Permit No. INA/015/007

Inspection Date 9/20/89

Permittee/Operator Name California Portland Cement

Business Address 695 South Rancho Avenue

City Colton State Calif Zip 92324-0514

Mine Hidden Valley ☐ Surface ☒ Underground ☐ Other

County Emery State Ut

Company Official(s) None

State Official(s) Bill Malencek & Bill Warmack

Time of inspection 8:30 ☒ a.m. ☐ p.m. to 1:00 ☐ a.m. ☒ p.m. ☐ Partial ☒ Complete

Date of last inspection 8/31/89 Weather conditions Pt Cloudy / Cool.

Acreage 960 ☐ Permitted 7 ☐ Disturbed 7 ☐ Regraded 7 ☐ Seeded 7 ☐ Bonded

INSPECTION REPORT COMMENTS

Permit No. INA/015/007

Inspection Date 9/20/89

Please number comments to correspond with topics on previous page.

General Comments: The permit was approved Jan 28, 1985. Only two permit stipulations were included, both have been completed.

Signs & Markers: The ID sign has been used as a shotgun target. While still ledgible, it seems this sign location at the end of a dead end road receives alot of abuse.

Disturbed markers & stream buffer signs were in place as required.

Stream Channel Diversion: In spite of the recent high intensity storms the main rupraped channel held up well, caught a sizeable amount of sediment among and between the large rip rap, and in two areas has a potential for future short circuiting. It is suggested the operator keep an eye on this potential problem area and repair and/or beef up the side rip rap the first time he has work performed on this mine site.

Other Sediment Control: The silt fences took a hard hit, but survived. The operator advised me he plans to

reevaluate the silt fences on the A seam. His current thinking is to minimize runoff from the top of the A seam by constructing a berm/diversion which would replace the current rock berm. Further, erosion matting would be installed over both the A & B seam.
He was of the opinion that such measures would require less maintenance. Also the matting would aid vegetal establishment on the steeper slopes by providing a micro climate.
Surface & Ground Water Monitoring: The MRP requires the surface flow to Ivie Creek to be sampled and measured during the months of May & September. Also, water quality samples must be taken at discharge points when flow is observed.
Revegetation: Vegetal monitoring conducted as follows:
Qualitative - monthly for the first two years, annually thereafter
Quantitatively - years 9 & 10.
