# INSPECTION REPORT

(Continuation sheet) Page 2 of 2

PERMIT NUMBER: ACT/015/007 DATE OF INSPECTION: 1/26/94

(Comments are Numbered to Correspond with Topics Listed Above)

**4c. Other Sediment Control Measures**

All sediment controls were well maintained .

**12. Backfilling And Grading**

The reclaimed road from the point where the pavements ends to the first water bar has been driven on by vehicles to the point where a well worn road now exists. As referred to in the last inspection report, the permit states (page 24-a) that barriers and roughned condition will prevent vehicle access. The operator has installed fence posts to prevent vehicle access. No roughening or reseeding of the road area has taken place.

**13.Revegetation**

The fill slopes had evidence of vegetative growth ( no documentation of the kind of vegetation was made). No significant erosion had occurred on the A seam and B seam fill slopes todate, although the matting which may have once protected these slopes is gone. If significant rainfall occurs in the area then erosion may effect revegatation efforts .
