FROM: Randy Harden, Reclamation Engineer

RE: Proposed Temporary Waste Storage Locations, US Fuel Company, Hiawatha Mine, ACT/007/011-89D, Folder 2, Carbon County, Utah

SUMMARY:

This memo is in response to U.S. Fuel's request to provide additional temporary storage areas of waste rock materials at the mine sites. This proposal was received by the Division on March 22, 1989.

ANALYSIS:

The proposed temporary storage locations are within the current disturbed areas for the mine sites. The operator has provided the locations of these sites on partial copies of plates III-8 and III-9 of the Mining and Reclamation Plan.

These temporary waste sites are to serve the operator as designated areas to store small amounts of rock waste material developed through miscellaneous underground activities. The primary purpose of these sites is to allow temporary storage of these materials to facilitate operating ease due to the remote location of the rufuse pile.

RECOMMENDATION:

The addition of the temporary storage facilities for underground development waste are acceptable in the format presented to the Division. These additions to the facilities should be approved. Upon subsequent submittals of plates III-8 and III-9, the operator should be reminded to include the location and designation of the temporary waste storage locations. Until such revision require resubmittal of these drawings, the reference copies of the drawings are considered adequate.
