DIV. OF OIL, GAS & MINING

Mary Ann Wright;

I am writing to a recent letter from Utah Division of oil gas and mining. You asked for a map to scale of each of our mines. We have 4 mines and they are semi-developed. On Sept. 24 I had a man on our claims from Salt Lake. He is planning on coming back. I hope to lease him 2 of our mines. He has a rock bolt plant in Salt Lake and also Pensylvania. So he is definitely a million. I was surprised in that he had a lot of experience in underground mining. He would probably do some surface drilling. Surface drilling cause very little surface disturbance drilling but would still be bonded. In your letter you wanted a map to scale of each mine. I tried to get my friend and partner also owner to provide me some maps. Last Sat. the ambulance came and got him and took him to the Richfield Hospital. He has a liver problem. This summer I have seen him go down hill fast. He is 6 ft. 4 inches tall and must of weighed 235 lbs. He has no energy and is just able to get around. Also as the

Terry must of lost 30 or 40 lbs. this summer. Also it has affected his speech. He talks slower. Also I think it has affected his concentration and memory. Yesterday I went to the Richfield Hospital and Terry told me he hadn't finished any of the maps. Terry is either in his late 40s or early 50s. He and I have surveyed all of our claims. If he hadn't been sick he could of completed all 4 of my maps in a couple of days. If Terry doesn't get a liver transport I think he will die this year. All of semi-developed and have great potential. Our mines are about 4-5 miles below the Gold Mt. Mining District. In the early 1930s. At Kimberly the Annie Lorie-Bluebird Mine had a 75 ft. high grade quartz fissure that was mined on 4 levels down to the 600 ft. level. The Annie Lorie-Bluebird was No. 2 in the State of Utah. As far as my self, I am 78 years old and have a bad hip. Otherwise I would already have our mines in operation. Before we get any mine in operation we will contact you. All our mines have reclamation bonds. As I have no one to prepare the maps. I would not be able to furnish them.

Sincerely yours
Lawrence W. Priesley
