Pit B-1: Excavation is primarily contained within the final borrow volume. All Pit B-1 excavated material (except 62,000 CY placed underground the 3.1 South slope) was directly backfilled to the intermediate surface shown on Drawing 5-35 for subsequent rehandle as part of the borrow to backfill Pits 9-C & 16. Therefore, this area was not accounted as additional excavated area and only incurred additional bond as it was covered for the 3.1 slope backfill.

Contour Interval = 2'
