P.O. Box 144870
Salt Lake City, UT 84114-4870

Gentlemen:

Enclosed are the monthly discharge reports for the Deer Creek, Trail Mountain, Cottonwood/Wilberg mines and the Hunter Coal Preparation and Blending Facility for the month of December 2014. All parameters were in compliance with UPDES permits except for the Deer Creek Discharge DCD-002 which exceeded the 1 ppm limit (1.06 ppm).

We believe that the elevated iron in the mine discharge is coming from groundwater that is being pumped from the "Mill Fork" area of the mine where groundwater entering the mine comes in contact with soluble iron in the form of pyrite minerals. Deer Creek Mine is no longer mining coal as of January 7, 2015. Up until the shutdown, most of this water was being recycled within that area of the mine for use in mining equipment. Now that the equipment is no longer running, the water in that area is being pumped out to the Deer Creek portals where is being mixed with the waters from the rest of the mine, pushing the total iron content to just over the 1 ppm limit. Our plan is to seal off the Mill Fork area of the mine as soon as the equipment can be moved out. Seals are being constructed as of the end of February midway out of the Mill Fork area, and then a set of permanent watertight bulkheads will be constructed to seal off the entire Mill Fork area shortly thereafter, pending MSHA approval. This should eliminate the flow of higher iron water from the Mill Fork area of the mine into the rest of Deer Creek Mine. The flow from the Deer Creek portals should then be significantly reduced in volume and iron content and return to historical acceptable water quality parameters.

If you have any questions concerning these reports, please feel free to call Ken Fleck at (435) 687-4712.

Sincerely,

Kenneth S. Fleck
