
LEGEND

—7— SEAM THICKNESS. Rock partings less than 12 inches thick are included in the isopachs.

FAULT, showing intercept with Sunnyside main coal bed as projected from surface observations. Dashed where approximately located, dotted where inferred. Displacements from structure contours.

DRILL HOLE. Designation and seam thickness noted.

OUTCROP SECTION. Designation and measured seam thickness.

COAL OUTCROP. Solid where exposed, dashed where concealed.

EXPLORATORY ENTRY. Driven from Geneva Mine 1957–1962

MINED OUT AREA. Geneva Mine.

BURN AREA. Where burn is mapped at the outcrop, it is assumed to extend into the coal 500 feet under canyon floors and 1,000 feet on points.
