1997 Trail Canyon Vegetation Monitoring

The 1997 vegetation monitoring for Trail Canyon consisted of qualitative observations of the reclaimed areas. The following observations were made in 1997.

Reclaimed Sediment pond

The vegetation within the reclaimed sediment pond has increased and grown substantially from 1996. The vegetative growth appears to be doing well.

Reclaimed Roads and Pads

The appearance of the vegetation throughout the reclaimed site appears to be doing well, and is visually similar to the vegetation measured in 1996.

A small area on the North end of the reclaimed portal access road was encroached upon by a resident of Trail Canyon. This area was repaired and reseeded in October, 1997, in accordance with the approved mitigation plan. A copy of the seed mix tags are attached.

Noxious Weeds

White top and bindweed were observed adjacent to the reclaimed area near the middle pad reclaimed access road. These noxious weeds were sprayed in the Spring and the Fall of 1997. The weeds will continue to be monitored and sprayed to insure they are kept away from the reclaimed areas.

Sincerely,

Charles Reynolds
