1588 West North Temple
Salt Lake City, Utah 84116

Re: Belina No. 1 Mine Act /007/001

Dear Mr. Daniels:

This letter is intended to serve as an addendum to the Belina No. 1 Mining and Reclamation Plan. The following items are to be amended:

1. Following operations, the surface facilities pad and graded slopes will be stabilized through establishing a diverse vegetative cover. The following species are recommended by the U.S. Forest Service for planting in an alpine environment.

Plant	Seed Per Acre (lb.)
Smooth Brome	3
Timothy	3
Orchard Grass	2
Intermediate Wheatgrass	2
Kentucky Blue Grass	1
Meadow Foxtail	1
Ranger Alfalfa	1

- A. Fertilization will be based on soil analysis of the area to be seeded.

Due to the climate and soil conditions, it is felt that fertilizing is not needed; however, if fertilization is required the soil will be tested and the amount determined.

CIRCULATE TO:

DIRECTOR _____

PETROLEUM ENGINEER _____

MINE COORDINATOR _____

ADMINISTRATIVE ASSISTANT _____

ALL _____

RETURN TO *Belina* _____

FOR FILING

Page -2-

B. Seeding will be performed by broadcasting or hydroseeding.

It was mentioned in the Mining and Reclamation Plan that hydroseeding will be used along with a wood fiber and straw mulch.

2. Extraneous debris, scrap lumber or metal, unuseable buildings, and other objects related to the mining operation will be removed, buried, or disposed of so as not to be visible on the mine site.

Once the mining is completed the surface facilities will be dismantled and removed from the mine site. After the surface facilities are removed, six inches of topsoil will be spread and contoured using a motor grader. The topsoil will then be seeded with 13 pounds of seed per acre.

We will be happy to supply additional information as rapidly as possible upon your request.

Sincerely,

Robert J. Steele
Vice President
Engineering & Construction
