RE: Review of Culvert Installations Not Shown in the Permit Plan, by Andalex Resources, ACT/007/019, Carbon County, Utah

These changes are not approvable at this time. To review these changes, a map is needed that clearly depicts the drainage area, watershed slope, or channel slope (culvert). The drainage controls that are to small to be shown by the topographic contours should also be shown on this map.

RE: Review of Culvert Installations Not Shown in the Permit Plan, by Andalex Resources, ACT/007/019, Carbon County, Utah

These changes are not approvable at this time. The maps are of insufficient detail to determine drainage area, watershed slope, or channel slope (culvert). The drainage controls are likewise undiscernible.
