RE: Summit Minerals No. 1
Coal Mine Project

Dear Ms. Filas:

We have reviewed plans and supporting information for construction of the detention pond designed to receive storm run-off from a 14 acre disturbed drainage area. The plans and supporting information for the detention pond appear to comply with the Wastewater Disposal Regulations. Based on the foregoing, a construction permit is hereby issued as constituted by this letter.

The pond volume of 1.8 Ac. Ft. is designed to detain surface runoff generated from a 10 year 24 hour precipitation event and the 18 inch overflow structure is designed to discharge water generated from a 25 year 24 hour precipitation event.

The dikes of the pond will be constructed on a 2 to 1 side slope and the high water elevation is 8 feet with 3 feet of freeboard. A baffle will be installed around the 18 inch over flow pipe and will extend below the drain valve, located on the overflow pipe.

If there are any questions concerning this matter, please contact Lyle Stott of this office.

Sincerely,

UTAH WATER POLLUTION CONTROL COMMITTEE

Calvin K. Sudweeks
Executive Secretary

Dear Mr. Alkema:

Re: Reclamation Plan, Summit Minerals, Inc. No. 1 Mine, (Blackhawk Mine), INA/043/001, Summit County, Utah

Enclosed please find one (1) copy each of the Reclamation Plan, Summit Minerals, Inc., No. 1 Mine, INA/043/001, Summit County, Utah, dated December 22, 1986. This information is being forwarded for review by the Division of Environmental Health of your office.

As you will recall, the MOU between our Divisions' calls for the following:

B. Mine Plan Review.

1. Upon submission of a mining and reclamation plan to DOGM, the DOGM, shall, in consultation with DOH, review the operator's list of licenses, permits or approvals to determine whether or not approvals from DOH have been issued.

2. If any permits or approvals from the DOH have not been issued, the DOGM will submit to the DOH those parts of the permit application containing matters within the DOH's jurisdiction or interest for review and response and inform the operator in writing that he must contact DOH for the appropriate permits and approvals.

3. If additional information is required by DOH for any permit or approval, the DOH shall contact the operator for such information. Copies of any such requests and the operator's response to such request shall be forwarded by DOH to DOGM.

4. Within two weeks of receipt by DOGM of the mining operator's submission and any additional information requested, each DOH bureau shall contact the DOGM with preliminary written notification of the status of any outstanding permits or approvals. If DOH determines to reject the operator's permit application or has any major problems with the operator's mine plan, the DOGM may convene a conference between the state agencies and the operator as soon as possible.

5. The DOH will make every effort to have their response to the mine plan and any other DOH permits and approvals finally completed within 60 days of the DOH receipt for the operator's complete application for DOH permits and approvals.

The Division appreciates your cooperation and asks that all comments and communications, regarding the mining and reclamation plan review, be channeled through this office to allow a single set of stipulations and requirements to be sent to the operator. The Division is attempting to complete its review of these plans by April 9, 1987. If your agency has any comments on these plans please forward them by the above date. If you have any questions, please contact me or Susan C. Linner of my staff.

Sincerely,

Lowell Braxton
