INSPECTION REPORT COMMENTS

Permit No. ACT/007/022

Inspection Date 5/13/87

Please number comments to correspond with topics on previous page.

Introduction. General site conditions were similar to those of the last inspection of 4/28/87 made by the undersigned. The site was dry, the plant operational, and no significant problems were encountered.

Follow Up Items. The irrigation water line reconstruction mentioned in the inspection of 4/28/87 has been delayed because of contract extenuating circumstances. The delay has not now, nor will it present any on and/or off site environmental problems. A revised target completion date of June 30 has been established.

Comments - Inspection 5/13/87.

[4C]. Sediment pond conditions are still not propitious that would be most conducive to effective cleanout. As soon as favorable conditions exist the permittee intends to clean and redress the sediment ponds. No water was being discharged. The lower sediment pond was nearly full.

[13] Revegetation test plots are currently under discussion between Dan Guy, BECC and Kathy Mutz, DOGM. A formal

request is being prepared by Dan Guy to delay seeding the test plots on the refuse pile until the fall of 1987. The reason for the request is that on severe sites, fall seedling survival is usually higher than spring seedling survival

On the NE portion of the site, north of the sediment ponds and west of the pump house an area of about 6 acres was seeded with a grain drill utilizing the prescribed seed mix. This too is a high risk/establishment site. However favorable rains this week, a week after seeding should aid germination.

16 ROAD. Gravel resurfacing was underway from the gate to the processing plant. Drain ditches were clean and functional
