INSPECTION REPORT
(continuation sheet)

PERMIT NUMBER: PRO/007/034 DATE OF INSPECTION Oct. 18, 1988

(Comments are Numbered to Correspond with Topics Listed Above)

1. PERMITS:

The final items prior to issuance of a permit have been addressed. Soldier Creek Coal Company submitted the required reclamation bond for the Banning loadout on October 17, 1988. If the division finds things to be in order, a permit for the facility should be issued shortly,

Soldier Creek is now in the process of finding a contractor to do the construction at the site and they hope to start construction the first part of November.

4d. OTHER SEDIMENT CONTROL MEASURES:

The site is completely dry. The berms and silt fences used for sediment control around the site, appear to be in good condition. Straw bales are also in place along the south drainages.

4f. EFFLUENT LIMITATIONS:

No water was being discharged from the site at the time of this inspection.

16b ROAD DRAINAGE CONTROLS:

The culverts under the main haul road are clear. The operator is planning to install silt fences along the drainages to the road culverts to check erosion. A few small rills have developed along the road where grading was done to resurface the road this past summer. The operator will check on revegetating some of the graded area.

The railroad has not installed the culvert beneath the tracks as yet. The culvert is on location and the operator hopes to see it installed soon.
