INSPECTION REPORT COMMENTS

Permit No. Act 007/033

Inspection Date 2/4/97

Please number comments to correspond with topics on previous page.

General Comments Snow conditions at the surface mine was no different than covered in the January report.

Permit The permittee has applied for phase I bond release on the reclaimed haul road. The notice has been published in the Sun Advocate, local newspaper. The bonding issue has been settled and record closed on this item.

Field The only three places where snow removal has taken place includes the tipple, active mining area and spoil pile.

Mining Area In the interest of improving mining operations the permittee should initiate action to remove the exposed slurry cell embankment material. This was discussed with Mr. Netz.

Surface mining and hauling coal to the tipple was underway during the inspection

Spoil Pile Since the last inspection additional spoil material has been placed on the east end of the pile. When rock/coarse spoil material is placed the operator must secure embankment material as discussed above in order to get proper compaction.
