Subject: Fwd: RE: Crandall Canyon Shaft Water Pumping and Backfilling

CC: Darby, David; Grubaugh-Littig, Pam; Hess, Pete; Western, Wayne

Thanks Wayne. I agree that pumping initially into the pond would be a good idea, especially if they have a similar set up as before with a flexible hose that could easily be placed into the pond at first and then moved into the stream bed if it is running clear. That's all from me, thanks for keeping me in the loop.

FYI,
Update from Dennis on Crandall Shaft #2 water conditions. I expect we'll all hear something soon from Dennis once he lines up his contractor again. Once notified, I guess we'll all need to give the green light again if all is in order. I wonder if we should require them to pump into the new pond upon start up, so we don't have the dirty water issue if pump gets lowered to far down the shaft again? Any other issues or concerns to forward to Dennis that need to be addressed? Let's continue to coordinate as things proceed.
Thanks,
Wayne
