INSPECTION REPORT COMMENTS

Permit No. INA/015/002

Inspection Date July 11, 1989

Please number comments to correspond with topics on previous page.

Follow Up On Previous Inspections. Walked over the entire mine site. Three general areas show evidence of work by the operators' subcontractor.

(1) Construction of a bypass truck trail outside the permit area since the gate and road inside the permit area has been rehabed.

(2) Repairing and extending silt fence. Installing straw/gravel dumps where rill erosion had started. and

(3) Repaired subsidence cracks.

Diversion. The rock lined diversion is not eroding. However the area has not been subjected to high intensity storms this season. It would appear that this diversion should hold up well unless edge cutting and bank erosion becomes a problem. Keep an eye on this diversion for maintenance should avoid major reconstruction.

Sediment Pond: Pond appeared stable and did not contain runoff.

Other Sediment Control. In repairing the silt fence and constructing sumps the subcontractor did the work with heavy equipment. The operator has agreed to do some followup site preparation work and seeding areas that may have been impacted by the heavy equipment. He stated a letter would be submitted committing the work noted above.

Road. Road inside the permit area and within the fenced mine site has been decommissioned. This road lead to public lands on the mesa. The gate in the past has been left open resulting in livestock gaining access to the mine site. A road outside the permit area has recently been constructed to gain access to the mesa noted above.
