INSPECTION REPORT COMMENTS

Permit No. INA/015/004

Inspection Date _____

Please number comments to correspond with topics on previous page.

[1] Permits: Salient permits were reviewed together with allied information and found to be in order.

[4c] Sediment pond observed in the field did not contain any water. Inspection reports were reviewed. These covered the last year and were signed by Dan Guy. The pond has not discharged.

[4d] Surface and groundwater monitoring records were in accordance with permit and recent changes. Lab analysis were reviewed and found within acceptable limits.

[13] Revegetation observed in the field on the upper, lower, and along the road looked good. Grass forbs, and browse plants have become established and made good growth this spring. The browse and sweet clover plants have been grazed by wildlife primarily elk. Some pine trees on the lower site still showed evidence of moisture stress; however, was not as noticeable as earlier spring observations (4/27/87).

In summary all parties were pleased with the current results.

Copy of report mailed to Dan Guy, BCCC; Donna Griffin, OSM

Copy of report given to John Whitehead, Joe Helfrich, DOGM

Inspector's signature M. J. Malmick 6/2/87 No. 26.
