Memo to Coal File:

7 + #3

RE: Sediment Pond #3 Modification
 Valley Camp of Utah, Inc.
 Utah #2 Loadout Area
 ACT/007/014
 Carbon County, Utah

After receiving and reviewing Valley Camp's modification to sediment pond #3 at Utah #2 loadout dated October 28, 1982, it was found that additional information would be required in order to complete the review. The additional information requested essentially consisted of referral to the existing MRP and previously submitted correspondence. Since the plan is currently undergoing a technical analysis conducted by a contracted group, it was felt that further work on this matter by the Division would essentially duplicate the sediment pond design analysis and review. It has, therefore, been decided to postpone further modification review until the Technical Analysis (TA) has been completed and all required information is available and correct.
