INSPECTION REPORT COMMENTS

Permit No. IN17/015/007

Inspection Date 2/7/90

Please number comments to correspond with topics on previous page.

General Comments. The mine site had previously received snow. The north slopes were snow covered, the south slopes bare and on the level areas patches of snow covered the ground. Snow was falling at the time of the inspection. It does not appear that any significant runoff has occurred since the operator completed extensive maintenance work.

Permit. Permit was approved on 1/28/87 and expires 1/29/92.

Signs & Markers. The I.D sign has been detached from the post. The sign is located at the end of the blacktop road and subject target practicing. The operator may, in light of the above problem, consider moving the sign in the same area but to a less vulnerable target area. While the sign can be read, at a minimum the operator should reattach the sign.

Stream Channel Diversion. The maintenance work on the undisturbed drainage below the gate should provide additional protection to the stream channel associated with the access road. No evidence of a significant flow since

the work was completed.

Diversion Realigned diversion at the upper end of the A seam should provide additional protection to the A seam outslope. No evidence of runoff.

Revegetation No livestock or livestock tracks were observed within the fenced area, last fall seeding was checked by the Divisions biologist during the seeding operation. The undersigned did not observe any seedling germination.

Roads The barriers placed by the T.D sign are & have been effective in curtailing vehicle access.
