RE: Revegetation of upper high-wall area.

Attention: Dave Lof

Dear Dave;

The upper highwall disturbed area on the south end of our mine property, (see enclosed map) will be re-seeded this anting season.

The method of revegetating will consist of using the existing soil with amendments. A good seed bed established and fertilized with nutrients will be used. Seed mix will be hand broadcasted and hand raked to ensure a good soil-seed contact and prevent excessive compaction. We will mulch with straw to stabilize the land surface until plants become established.

We will re-seed the disturbed areas with the following seed mixes:

Grasses	Rate Pounds/acre
✓ Crested wheatgrass	1
Western wheatgrass	1
Slender wheatgrass	1
✓ Intermediate wheatgrass	1
✓ Pubescent wheatgrass	1
✓ Russian Wildrye	1
Great Basin wildrye	½
Kentucky Bluegrass	½
✓ Alfalfa	1
✓ Smooth brome	1
✓ Orchardgrass	2
Forbs	
Utah Sweetvetch	1
Pacific Aster	½
✓ Yellow sweetclover	1
Showy goldeneye	½

P.O. Box 551 Orangeville Utah 84537 a Natomas Coal Company subsidiary
