DES-BEE-DOVE/WILBERG JUNCTION ROAD

DRAINAGE INSPECTION AND MAINTENANCE PLAN

INSPECTION

Inspection of drainage control and conveyance structures shall be conducted during the months of May, July and September, along the length of the junction road.

The inspections shall include all drainage ditches and culverts. Ditches shall be examined for significant erosional damage. Culverts shall be examined for blockage at the inlets and significant erosion at the outlets.

The inspections shall be documented and the records shall be kept for two (2) consecutive seasons.

MAINTENANCE

Minor repair and maintenance work, which does not result in a modification of the overall drainage plan will not require plan submittal and approval.

Within thirty (30) days from the time that a major drainage problem is observed, a plan, addressing mitigation measures, will be submitted to the regulatory authority.

The plan shall be implemented upon receipt of approval from the regulatory authority.
