INSPECTION REPORT COMMENTS

Permit No. ACT/015/018

Inspection Date February 29, 1988 and 1 March 1988

Please number comments to correspond with topics on previous page.

General Comments: Ray Christensen (UP&L) accompanied the undersigned inspector on this complete inspection. Ground conditions were semi-frozen with snow melt drainage flowing into the pond according to dramage design.

1.) Permits: The new UPDES permit expires October 31, 1992. This permit allows for a 1 ton/day limit for TDS.

4.) Hydrologic Balance: The undersigned inspector informed the operator that map drawing number CM-10764-DR titled "Disturbed Surface Drainage Collective System" requires minor hydrologic revision. The operator will submit eight revised copies to DOGM on or before April 1, 1988.

4.b.) Diversions: All surface drainage was flowing into the pond. Some culverts had a buildup of ice at the inlets, but were still flowing and not causing a short-circuiting problem. The operator is aware that preventive maintaince is required before and during the runoff season to keep the culverts functional.

INSPECTION REPORT COMMENTS

Permit No. ACT/015/018

Inspection Date February 29, 1988 and March 1, 1988

Please number comments to correspond with topics on previous page.

4.c.) Sediment Ponds and Impoundments: On July 21, 1987, the pond was discharged and sampled. TDS was above its NPDES limit and the operator submitted a letter to EPA and Utah Department of Health. The letter was sent August 11, 1987. As stated earlier, the new NPDES permit allows for a 1 ton/day limit on TDS.

Water was seen flowing into the pond. The pond appeared semi-frozen and no discharge was evident.

14.) Subsidence Control: The 1987 subsidence report should be ready by April or May of 1988.
