1 Permit - Deer Creek is considered an emphermal stream above the mine and therefore the follow-up item from the last inspection regarding certification of the diversion based on stream classification is not applicable.

An approval to ~~the~~ amendment # 015/018-~~9E~~ was received at the mine office dated 2/6/92 Some confusion on the NOV# needs to be clarified and the status of approvals for culvert calculations clarified. The NOV referenced in the letter was NOV N90-35-4-1 but it was felt by Mr. Davis and myself that NOV N 90-32-6-1 was the appropriate # to be referenced. This matter will be checked on and clarified by the next inspection

4b Diversions - All drop inlets at the mine facilities were functioning well. The

remainder of the site was covered in 18" of snow.

4e The NPDES permits expire this year and the operator is in the process of resulting a renewal of those permits. The sediment pond at Beer Creek has a PH sampling criteria of weekly and has never had a compliance problem. A change in that requirement will be requested.

The overall mine discharge is about 1700 gal/min dropping from a high in 1989/90/91 to provide about 1000 gal/min to Beer Creek and 700 gal/min to the power plant.
