INSPECTION REPORT COMMENTS

Permit No. Act 015/018

Inspection Date 1/10/92

Please number comments to correspond with topics on previous page.

Permit. Mr Davis informed me that they were working on the diversion certification on the intermittent stream that drains an area greater than 640 acres. This work should be done before the next complete inspection since this is a mine record issue.

Sediment Pond. Sediment pond contained water, was ice covered and was discharging. The discharge was clear and odor free.

Other Sediment Control. Silt fences and straw bales were in a good state of repair. Straw bales had been installed beneath the conveyor, near the sediment pond, and as requested in the December inspection.

Coal Processing Waste. The sediment basin at the new waste rock site contained water, but was ice covered. The undersigned questioned whether or not the water would backup into the refuse before it discharged through the open spillway. After much discussion and observing water (ice) levels at the spillway and refuse area I concluded water in a standy body would not contact the refuse. It would contact soil that remained after topsoil removal.

Support Facilities: Two projects approved by the Division are currently under construction. They include:

(1) Electronic control house. Workmen were at the site. A concrete abutment, steel frame, and sediment control measures had been installed. The sediment control consisted of a depression and strawbales.

(2) Loading Dock. No work was in progress during the inspection. Concrete footing and pad had been completed.
