Monitoring was completed on August 30th and September 1 at the South Fork. Flow was estimated at 110 -120 gpm. The ponds remained dry and springs continued to flow at similar rates. Flow in the creek channel was observed above and below the rock fall and appeared to be similar. Scattered rain showers in the afternoon at South Fork. Please contact me with questions. Thanks, Vicky

The previous report covered three weeks, thus just one week is included in this report.
