Dear Wayne,

Accompanying is the original letter from the Grouse Creek Livestock Association which outlines their thoughts concerning post mine status of the North slide access road, along with the map which highlights this road. I had advised them to send this directly to you, but they mailed it to me instead.

Also, as per a phone message from Lynn, where he requested an estimate from me of "mine life" at Grouse Creek based on 500 - 600 tons of material removed annually, I would imagine the source to be productive for fifteen years at that rate, and still allow some depth of stone in all slide dimensions and boundaries. This is a very modest estimate Wayne, and it is likely the source could sustain this rate of removal for a much longer period. For the sake of a reasonable figure, I would say fifteen (15) years.

In addition, please see the attachment for 105.2 "Process area map explanation". This should be forwarded to Tony for his review. I meant to include it in my submissions following the initial review, but failed to. Please accept it at this time. Thanks for your help in this process,

Sincerely, Bill
