Re: Conversation with Mr. David Taylor, operator Boddy Toddy Mine

I called Mr. Taylor, because he was concerned that his paperwork was in order. He indicated that the site would be active again late March '89, and that the operation was gearing up to do more mining.

I told him everything was in order with our files and that I would like to visit the site this spring.

Mr. Taylor indicated that Rockland Corp. which markets and processes the Boddy Tody product will be building a processing facility in Emery. The facility will be for the manufacture of Boddy Tody & soil fertilizer, and will employee 25 people.

Rockland decided to install the plant in town rather than at the mine site, to avoid meeting DOGM reqs.
