Salt Lake City, Utah 84180-1203

Dear Mr. Summers:

Attached are updated summaries of the water quality data collected for Valley Camp of Utah, Inc. through September, 1992.

Seven surface water monitoring sites were visited on the 31st of August. Surface water monitoring sites VC-4, VC-5 (Whiskey Canyon Creek above and below the Belina mine) and VC-12 (Finn Canyon Creek above Clear Creek) were dry. A water quality sample was collected at VC-1, VC-2, VC-10 and VC-11.

Eight ground water monitoring sites (springs) were also visited on August 31 and September 1, 1992. Spring S24-12 was dry. A water quality sample was collected at the other seven springs.

As you will notice, spring S36-7 has been added to Valley Camp's monitoring program. After reviewing identified springs and associated flow data for springs located in upper Boardinghouse Canyon it was determined that spring S36-7 would best represent the area for monitoring the effect on ground water, if any, of underground mining activities in upper Boardinghouse Canyon.

Please call if you have questions concerning the data or if we may be of other assistance.

Sincerely,

Jerry Hansen

cc: Steve Tanner - Valley Camp of Utah, Inc.
