AS I HAVE EXPLAINED TO SITLA AS EACH SUCCEEDING YEARS DIGGING WILL BE APPROX. THE SAME AND AS EACH YEAR WILL CAUSE A SMALL DISTURBANCE ON THE PREVIOUS YEARS WORK PLUS EXPERIENCE THAT HAS TAUGHT US THAT TO RESEED BEFORE THE SECOND YEAR IS A WASTE OF TIME AND SEED.

WE DON'T KNOW ALL THE REASONS BUT ALKALIE AND BENTONITE IN THE SOIL (MAYBE SOMETHING ELSE) KEEP SEED FROM GERMINATING THE FIRST YEAR UP TO 90%. WHAT WE HAVE FOUND IS TO LET IT LIE ONE YEAR AT LEAST, IF DRY YEARS TWO, THEN SEED WITH YELLOW CLOVER AND OR ALFALFA, AFTER ABOUT TWO TO THREE YEARS WHEN IT HAS RESEEDED ITSELF THEN DISC THE AREA AND RESEED WITH A GRASS MIXTURE.

SINCERELY
