SUBJECT: Cord & Radon Uranium Mine Reclamation M/037/019

DATE: 8-16-91

The Radon and Cord sites were never permitted by Atlas or Energy Fuels. They are considered pre-law sites, having not been active since passage of the UMLRA.

Energy Fuels essentially volunteered to do the clean-up and reclamation work on these sites. They are concerned about liability, as well as their public image. They did contact me for verbal approval to go ahead with the reclamation of the Cord and Radon. Their reclamation plans concern chiefly the sealing of shafts and the removal of safety hazards from these sites. The concrete foundations will be left unreclaimed. A letter and plan designs are in the file.
