Route 4 Comments.

Return to MT by Sept. 7

① I agree, except if the borrow area is an area completely devoid of veg etation (bar deposit)

② Crested W. has been successful in the adjacent chaining. Get MAW to suggest a slightly more diverse mixture and recommend.

I think Tent. approv. should include the submittal of plans for the proposed borrow of gravel as indicated on page 2 of 4 of MR-2 (narrative). Included should be map & revег plans for borrow area. Also, require test plots for crested wheatgrass to see if revег can be accomplished.

8/17/79

How about the confidentality bit? ③ Exp only

→ Maybe they need to understand what we can keep conf.

Revege with only crested wheatgrass may not be acceptable?

Good Comment about the Borrow area

~~The areas to be drilled~~

Maybe a better map of surface facilities also

TJS

No additional comments, but I think we ought to keep a close eye on these turkeys.

JWS → Also, no surface facilities map.? *

8/21/79 As I recall, when we met concerning this mine we decided that crested wheat would be ok given the huge field of adjacent w.g. planted by BLM. Nonetheless, it still wouldn't hurt them to throw in a few more species & up the #/Acre. — MA
