Calliham & Sage

Comments

Revegetation: Who by? (Operater?)
Describe testing of Reveg.
Seed mix good

Hydro: Diversion specs?
Sed pond specs! needed } This is not a coal mine & the pond it is not a sediment pond. MAW

Roads: why 6.5 acres left open? "for future access" MAW

Maps: Existing or proposed, How about prior to act?
Location of Sed pond? Not a sediment pond - although location should be shown on map & perhaps we should have Div. of Health approval letter in file for pond - as is the case with Snow Mine. - MAW

2-16-79

- Although contours are shown on overall map maybe they would be helpful on the two surface facilities maps
- where is the 2 ac pond (not shown on map) for mine water at the Calliham? Has Div. of Health approved design and treatment? Do they have a discharge permit? Check w/ McNeal.
- topsoil stockpiling originally not done, but committed to on M-8
- Do we need location of culverts and/or diversion system? (over)

- How are portals and boreholes going to be sealed?
- When are they going to establish reveg. test plots? How about letting us know what their plans are for this. They shouldn't rule out the use of mulch (MR-2).

JWS

Commitment to reclaim 27.3 acres of mine site. No commitment to reclaim pond.

Do not need specs on pond & diversion unless it is obvious hazard; ie, located in stream channel. However, no need St. Health approval letter.

Callingham + Sage

Maps: Show existing, proposed, and prior to act.
" pond location on map.

Hydrology: 2 acre pond - need construction permit + discharge permit as EPA requires.
- only if pond is put in.

water bearing strata

Revegetation: General description of revegetation program for all mines.
Seed mix looks good
Try use of mulch + fert. in test plots
if ~~[illegible]~~ no improvement not necessary to use in final revege.
