Dear Messrs. Larson:

Re: Disturbed Area Map, Larson Limestone Company, Larson Limestone Mine, S/049/011, Utah County, Utah

The Division received your letter and mine site map on May 26, 1992. Your letter estimates the active mine disturbed area at 3.5 acres (as marked on the map). This estimate does not appear to include the following mining-related surface disturbance: the truck scale area, waste dumps, bulk storage area, office/silo area, or any roads which would need to be included, according to Division rules.

At our last onsite meeting, there were two main questions to be resolved; 1) what is the current disturbed area for the mine operation? and 2) which roads have a verified post-mining land use? The Division's response letter of 1988 refers to a variance for roads with a continued post mining land use. The Division does not agree with the interpretation made in your latest letter where all roads on the property are claimed to have a post mining land use.

These questions were to be resolved with the help of a disturbed area map of the site. The map you provided may depict an accurate version of the mine site at some point in time, but it does not accurately detail the current operations. In order to resolve this matter, the Division is requesting that you provide an aerial photo of the mine site. The USDA-ASCS Aerial Photography Field Office at 2300 South, 2222 West, Salt Lake City, (801) 524-5856, can provide such a photo. The most recent aerial photos of Utah County were taken in 1987. While this is not exactly up to date, it will be sufficient (necessary, post-1987, changes can be penciled in). The photo should be of a scale of 1" = 500 feet. The cost for a 1" = 2000' black and white photo, 17" x 17", is approximately $17. An aerial photo of this scale will require approximately 4 weeks for processing and delivery. It is recommended that you visit the ASCS office
