Subject: White Oak 2nd & 3rd quarter Electronic Water Samples

Hi All,

Today after receiving email notification from Dave Miller that White Oak data was ready to update, I processed the following samples into the main APPX database with data for the 2nd and 3rd quarters 2000. The parameters that follow each sample were ones that were warnings OK'd by the mine. All of these warnings were related to the parameter value being equal to the detection limit. These values were reported at the detection limit. No standard deviation warnings were observed. This information is summarized in the attached Word document
